Professional summary

Senior software engineer and product lead with 20+ years across full-stack TypeScript/AWS products, native Android and iOS, and low-latency C++ audio. Builds applied AI features and tool-using agent workflows, including music generation and knowledge-grounded content publishing. Owns product definition, architecture, implementation, testing, release and operations; uses AI coding agents with direct engineering accountability.

Technical, product & delivery expertise

Product engineering
Kotlin · Java · Swift · Objective-C · C++ · TypeScript · React · Vue.js · AWS

Mobile, systems & SDKs
Android SDK/NDK · iOS SDK · SDK and API design · low-latency audio and DSP · device integration · offline-first workflows

Applied AI & agentic systems
music generation · LLM tool calling · structured outputs · knowledge retrieval · agent orchestration · ElevenLabs · DeepSeek · OpenRouter · Codex · Claude Code

Product, project & quality
product specification · requirements analysis · prioritization · stakeholder coordination · architecture · release delivery · technical project leadership · legacy modernization · automated testing · CI/CD · Scrum

Selected professional experience

Senior Web Developer - Equisix February 2026 - Present

Coinomatic — SaaS ownership, applied AI and agentic publishing

- Led requirements, architecture and delivery of the React/TypeScript SaaS, AWS services, exchange automation, Stripe billing and log-aware AI support; integrated the existing Next.js marketing site for production launch.
- Built recoverable scheduled and 24/7 monitoring runtimes with queues, idempotency, auditable state, automated tests and operational tooling; continued billing, timezone and reliability improvements.
- Built and validated an agentic content-publishing pipeline: knowledge-grounded planning and writing, independent factual/editorial review, structured outputs, scoped CMS publication, scheduling and operational reporting.

React · Next.js · TypeScript · AWS · SST · DynamoDB · SQS · Stripe · Payload CMS · OpenRouter · Vitest · Playwright

Case study: Coinomatic

Mobile Product Engineer - Motorkari.cz June 2024 - Present

Native Android and iOS product ownership and modernization

- Maintain both production apps, modernizing an inherited Kotlin/Java Android codebase and extending the Swift/Objective-C iOS app originally delivered in 2017.
- Modernized Android screens with Kotlin, coroutines and lifecycle-aware state; improved maps, nearby filtering, pagination, media playback, permissions and release tooling while preserving established workflows.

Kotlin · Java · Swift · Objective-C · REST APIs · Firebase Cloud Messaging

Case study: Motorkari.cz

Native SDK Engineer (Sequenex team) - Biolinq August 2022 - January 2024

Native SDK delivery for glucose-sensing medical devices

- Delivered iOS and Android SDK work, extended existing iOS applications, and built Swift and Kotlin sample apps that demonstrated device integration.
- Aligned Kotlin SDK behavior with its iOS counterpart and used Gherkin scenarios to define testable behavior before implementation.
- Worked API-first in a multinational remote Scrum team using Git flow, code reviews, and extensive QA practices.

Swift · Kotlin · iOS SDK · Android SDK · SDK/API design · Gherkin

Case study: Biolinq Medical SDK

Lead Mobile Developer (via Plaut / Bowbook) - SODB 2021 June 2020 - March 2021

Lead mobile delivery for Slovakia's 2021 national census

- Led native Android and iOS development, translating extensive and changing public-sector requirements into working applications on both platforms.
- Implemented offline data, CSV and service-driven updates, complex form rules, and on-device validation for field workflows that could not depend on continuous connectivity.
- Coordinated months of requirements refinement, acceptance cycles, stakeholders, and supporting developers through delivery under a fixed national deadline.

Kotlin · Swift · Android · iOS · offline data · form validation

Case study: SODB 2021 Slovak Census Apps

Mobile Product Engineer - Bowbook, s.r.o. April 2014 - Present

Long-term product ownership for the Rcherz mobile and scoring suite

- Built and maintain an Objective-C iPhone/iPad app, a Java Android app, and a dedicated Android scoring terminal for an international archery platform.
- Separated mission-critical competition scoring from the general product and implemented stability controls, remote device commands, polling, push messaging, and resilience for difficult outdoor Wi-Fi conditions.
- Maintain three active native products while sustaining the client relationship and deep product knowledge across an engagement active since 2014.

Objective-C · Java · Android · iOS · REST APIs · push messaging · offline resilience

Case study: Rcherz Suite

Independent product experience

Creator, Product Lead & End-to-End Engineer - Renetik Music Apps March 2021 - Present

Android music products, C++ audio and AI generation

- Built ten current Android music applications with at least 170K combined public Google Play installs as of 2026.
- Designed the shared C++ engine for DSP, sequencing, recording, looping and MIDI; extended transport recovery, event scheduling, device reconnection and performance.
- Built AI music and musical-sequence generation into the product platform, integrating ElevenLabs and DeepSeek with deployed Firebase workers, paid credits, purchase verification and cost controls.
- Own product direction, UX, Kotlin/native implementation, tests, releases and support, plus the multilingual VuePress/Vite website and combined-site delivery.

Kotlin · C++ · Android SDK/NDK · MIDI · Firebase · Cloud Tasks · ElevenLabs · DeepSeek · VuePress 2 · Espresso · UI Automator

Renetik Music Apps · Case study: Renetik Music Apps

Earlier experience

Additional full-stack and product delivery 2018 - 2025

Delivered coordinated Android, .NET GraphQL, and MySQL changes for Sensoneo; PHP/Yii/PostgreSQL work for Plaut; and mobile, Vue.js, Firebase, Spring, and AWS product work for other clients.

Native mobile portfolio and reusable foundations 2010 - 2020

Delivered iOS and Android applications for Motorkari.cz, TRIAD, LiveAgent, Post Affiliate Pro, and other clients while building reusable Objective-C, Swift, Java, and Kotlin libraries used across professional projects.

SaaS, desktop, and document systems 2005 - 2010

Progressed from junior to senior developer at QualityUnit across Java, C#, PHP, JavaScript, GWT, J2EE, Eclipse RCP, OCR, SaaS products, and PDF parsing/generation, with Scrum, TDD, and pair programming.

Early IT foundation 1997 - 2001

Built practical systems knowledge through PC assembly, software installation, customer support, Windows and Linux administration, networking, AutoCAD support, HTML, and wireless telecommunications work.

Education

Bachelor's Degree in Computer Software Engineering · Slovak University of Technology in Bratislava
